

How to DIY easyivy® faux foliage:

1. Measure the area you are wanting to cover in the desired type of easyivy® faux foliage panels (Length x Height)
2. Purchase the required number of 1m x 1m easyivy® faux foliage panels
3. Connect the panels together using the clips along the boarder of each panel. Black, medium sized, cable ties can be used to strengthen the clips if you deem it necessary
4. Cut the panels to the desired size using pliers or scissors
5. Attach the foliage to your structure using black, medium sized cable ties, 32mm black concrete nails, staples or adhesive (please see guide below):
